Date Palm Tree

Let's read & learn more about this amazing tree!

Dates are borne by exceptionally large trees that grow to a height of 69 to 75 ft (21 to 23 m).

These trees begin to provide fruit after four to five years and can live as long as 150 years.

Fresh dates are quite popular in every culture. Soft dates and dried dates are not only eaten but also gifted during auspicious occasions.

The fruit stalks of the date palm are used to make fuel and rope.

In the past date palms provided the perfect building material.

The trunk and leaves are used as a building material, as the leaf midrib is well-known for making furniture.

Date palm trees are one of the oldest plants to have been cultivated by humans.

Date palms cover 3% of the earth's cultivated surface.

وَهَزِي إِلَيْكَ بِجَذْعِ النَّخْلَةِ تُسَاقِطُ عَلَيْكَ رُطْبًا جَنِيًّا

Shake the trunk of the palm tree, freshly picked dates will drop upon you. Quran 19:25

Do you know the story of Sayyida Maryam (a) and the date tree after she gave birth to the Prophet Eisa (a)? Tell this amazing story to others or ask your parents about it if you don't know it!

Each tree can produce up to 150 kilograms of fruit each year. There are more than 200 varieties of dates with different shapes and flavors, however, all of them are the same in nutrition.

Plant Date Seeds At Home!

- 1 Clean off the seeds to remove any leftover fruit.
- 2 Soak the pits in fresh water for 48 hours.
- 3 Fold the seeds into a damp piece of paper towel.
- 4 Place the seeds and paper towel into a plastic bag and seal it.
- 5 Store the bag in a warm, dark place for 6-8 weeks. Check the plant regularly for growth progress or mold. Every 2 weeks or so, open the bag up and check for progress.
- 6 Once the seed has sprouted a shoot off of the roots, it's time to take it out and pot it!

Write a story about what you think is happening in this picture...
